

If we can run a profitable company that's kinder to human beings and to nature, why can't you?

We publish our impact report every year to measure our progress...

Here's how we did →

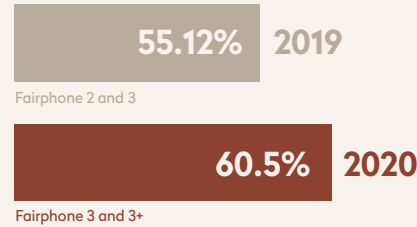

1 NUMBER OF PHONES SOLD

We make smartphones to create change: the more phones we sell, the more we can scale up and the bigger our impact.

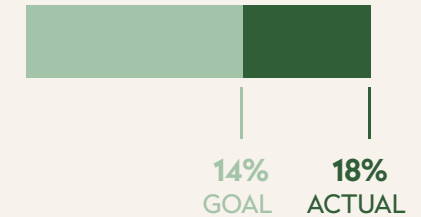

2 PHONES IN USE VS SOLD

CREATING PRODUCTS THAT LAST

Most phones aren't made to last or to be repaired, and there is a general lack of long term software support — this needs to change. So we create products that last. Because the longer you can keep your phone, the smaller its environmental footprint.

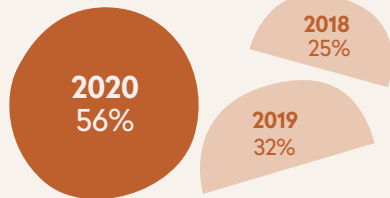

3 PHONES RECOVERED VS SOLD IN EUROPE

E-waste is currently the world's fastest growing waste stream, with tons of electronics being dumped and left to corrode all over the world. Through our Fairphone take-back service in the EU, we actively encourage users to send us their old smartphones. Together, we're taking a stand against e-waste

4 MATERIALS SUSTAINABLY SOURCED

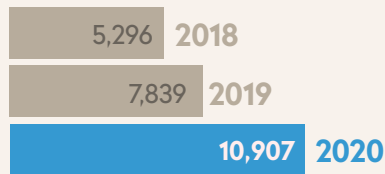

OF 8 FOCUS MATERIALS

Everything that's inside a smartphone has an impact on people and planet. There is a limited supply of post-consumer recycled materials from electronics, so for some materials, we will need to depend on the mining sector for decades to come. We're modeling the fairer sourcing of materials in our phones, that offer the electronics industry the greatest potential to create positive impact.

5 NUMBER OF PEOPLE BENEFITING

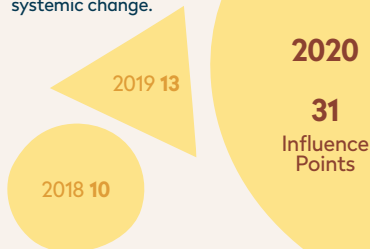

FROM FAIRPHONE'S SOCIAL INTERVENTIONS

Have you ever stopped to consider who made your phone? We believe that everyone working in the electronics industry should have a decent life, a sufficient income, a safe workplace and the opportunity to be heard on their opinions and concerns. Our worker-driven impact programs translate to real-time improvements for many workers in our supply chain.

6 INDUSTRY INFLUENCE

As a positive disruptor in the electronics space, it is clear to us that influencing other industry players is our main route to a fairer future. We created a system to measure the results and impact when industry players follow Fairphone's initiatives. By working together, we can accelerate impact, and achieve greater transparency and broader systemic change.

“There's no demand for a fairer phone” they said.

Turns out, there was.

We've met every one of your challenges. We invite you to meet ours.
